Leading imaging center Radiologie Muenster MVZ, Germany, implements its first Agfa direct radiography solution

The multi-purpose, dynamic DR 800 X-ray room supports the dynamically growing imaging clinic with excellent image quality and efficiency gains

Mortsel, Belgium – 10 June 2021 – 14:00 CET

- The DR 800 is a highly versatile, fully integrated and multi-purpose solution suitable for both general radiography and fluoroscopy.
- It enables lower dose, faster imaging and improves delivery of patient care.
- MUSICA® processes both static and dynamic (moving) images with the same, proven, high image quality and efficient workflow.

Radiologie Muenster, a leading Medical Imaging Center located in the center of Muenster, Germany, has implemented its first Agfa imaging solution: the multi-purpose DR 800 direct radiography room, with an eight-year maintenance contract.

The busy imaging center has a full portfolio of imaging equipment for diagnosis and treatment, including three MRIs, a CT, a PET-CT, a mammography system with tomosynthesis, three ultrasounds and three nuclear medicine devices. The dynamic and fully integrated DR 800, powered by MUSICA®, was selected as the center's digital X-ray for its versatility and excellent image quality.

Maximizing productivity and image quality

“The DR 800 was the best choice in terms of both image quality and workflow. The innovative, multi-purpose design enables us to maximize the productivity of a small room in our busy center. Furthermore, we were very pleased with the MUSICA® image processing software, which provides consistently high image quality and the potential for dose reduction,” said Astrid Wöstmann, Radiologist at the Radiologie Muenster.

One investment for fluoroscopy and general radiography

The versatile DR 800 can handle a full range of radiography and fluoroscopy exams, as well as minor interventional procedures with a single investment. All exams can be carried out in one room and the care provider can choose to work in the room tableside with the patient, or use the remote functionality. LiveVision Technology allows for accurate dose-free remote positioning.

MUSICA®: “First time right” imaging

The DR 800 comes with the MUSICA® imaging workstation, which enhances workflow and productivity, with a single, intuitive interface for smooth, efficient DR imaging.

MUSICA® image processing software brings intelligence to the entire digital imaging process for “first time right” imaging without manual post-processing. It delivers exquisite details throughout the image and offers the potential to lower patient dose. MUSICA® can handle fluoroscopic images with the same high quality and low-dose features that have made it the “gold standard” for radiology departments around the world.

“We are delighted that Radiologie Muenster, which has been the leading imaging center in Muenster for many years, has chosen its first Agfa imaging solution. The DR 800 is the “multitool of digital imaging”, and we are confident that it will support Radiologie Muenster to enhance its productivity and patient care. We look forward to developing a strong relationship with Radiologie Muenster now and in the future,” said Stefan Voigt, Managing Director and Sales Director Radiology Solutions DACH at Agfa.

About Agfa

Agfa develops, produces and distributes an extensive range of imaging systems and workflow solutions for the printing industry, the healthcare sector, as well as for specific hi-tech industries such as printed electronics & renewable energy solutions.

The headquarters are located in Belgium. The largest production and research centers are located in Belgium, the United States, Canada, Germany, France, the United Kingdom, Austria, China and Brazil. Agfa is commercially active worldwide through wholly owned sales organizations in more than 40 countries.
