

Agfa in Conquering COVID-19 – Story in China - Vulcan Mountain Hospital -

The epidemic situation in China has been released after 2-month solidarity and cooperation. But we will never forget the persistence and dedication of every social force, and the company like Agfa's contribution and backstage heroes like engineers, sales force, dealers, logistics...

To support the efforts of caregivers and the welfare of patients in Hubei province impacted by the coronavirus pneumonia epidemic, Agfa donated 5 million RMB in medical equipment to hospitals in the area. The equipment, which includes 50 medical film printers and 500 boxes of medical dry film, provided important medical assistance, while also demonstrating Agfa's concern and care for the people directly affected.

The choice of hospitals and equipment was made in consultation with Agfa's dealer in Hubei province, WuHan Hao Le Si Company. The first batch of equipment was delivered to the WuHan Vulcan Mountain Hospital on 1st February. Thanks to the 38-hour hard work at installation and testing, the printers were in operation the next day.

It was really a hard time as the block of Wu Han city, no other people were able to come and assist, We have only **Mr. Luo Xin**, Agfa maintenance manager, **Mr. Ma Jian**, Agfa Wu Han sales and **Mr. Lin Hong Wei**, General Manager of Wu Han Hao Le Si Company, **Mr. Song Jun**, engineer of Wu Han Hao Le Si. These 4 people resident in Wu Han worked as a team to pick up the equipment – followed up the transportation – did onsite coordination & communication –cleaned the passage and modality room – carried printers 5503 in the room – overnight testing - finally installed.

Wu Han Vulcan Mountain Hospital has a total construction area of 60,000 square meters, of which 34,000 square meters are newly built for quarantine zones, 419 wards and 1,000 beds (including 30 ICU intensive care wards), greatly relieving the patient admission pressure and becoming the "patron saint" hospital for Wu Han citizens. The hospital has officially admitted patients since 3rd February. Magically, it took only 10 days to build up.
